

## kitedrive™ sync

### Kitedrive sync keeps business information in sync.

Kitedrive file synchronization enables business professionals to access up-to-date files anytime, anywhere, on any device. As an integral part of Accellion secure file sharing solutions, kitedrive sync enhances business productivity by giving users immediate access to their latest files regardless of location or device.

### Designed for Business

Today's 24/7 business environment demands that users have secure access to the latest material for cross-boundary collaboration, anytime, anywhere. Kitedrive sync offers enterprise organizations secure managed syncing of business content by combining the ease of use of consumer-centric file syncing solutions with the IT controls and management that enterprises require.

With kitedrive sync, users can quickly, easily and securely access the most up-to-date information from their mobile device, desktop, or laptop. Users can install kitedrive clients on their devices. All files placed in kitedrive are synchronized via the cloud to ensure that users have anytime, anywhere access to Enterprise content, online and offline.

Using kitedrive, business users can quickly access the latest presentations, spreadsheets, financial documents, and product specifications across all devices to increase business productivity and responsiveness. Since kitedrive allows users to synchronize any type file, users do not need to use thumb drives or CDs or email documents to themselves as they move from device to device and from home to office and everywhere in between. With kitedrive sync, documents are where users need them to be.

#### Access Anywhere, Anytime

With kitedrive, files are accessible offline as well. When users need access to files offline, such as on an airplane and when out of network range, kitedrive ensures that the most up-to-date version of any synchronized file is automatically available on any synchronized device allowing users to continue to work on projects offline. Kitedrive automatically synchronizes file updates when users are online again.

#### Pausing File Synchronization

While synchronizing files enables users to quickly access files anytime, anywhere, inevitably users may want to disable sync while they edit files. With kitedrive, users can select to pause sync by choosing "Pause Sync" from the tool tray menu. By pausing sync, users can be sure that

#### KEY BENEFITS

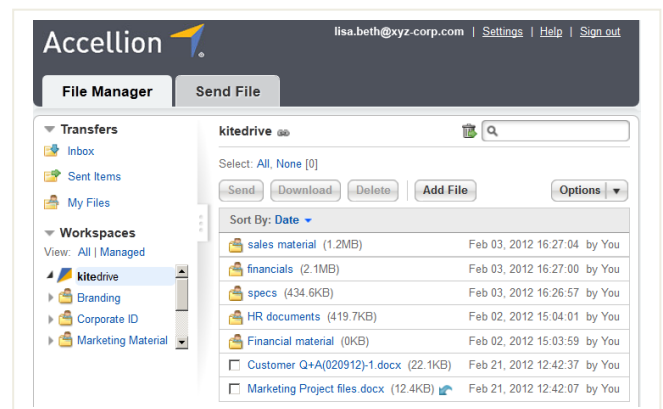

- Secure access to files from anywhere, anytime
- Real-time file updates
- Work offline or online
- Increased data security
- Compliance
- IT management of business file sharing
- Enterprise reporting of all file activity

work-in-progress files are not synchronized. Once edits are complete, synchronization can be resumed and users will have access to their latest material.

#### kitedrive Security

Kitedrive sync provides the ease of use of Dropbox-like solutions, but comes with the IT controls, security, and management that enterprises require. As with all Accellion solutions, administrators have access to activity logs to ensure security and compliance. Accellion supports authentication to the kitedrive client through LDAP and SAML. And kitedrive never stores or sends passwords in the clear. Authorization is done through OAuth to ensure a secure connection.

Kitedrive sync works in conjunction with data leak protection (DLP) solutions to ensure that file synchronization is not only secure and tracked, but also monitored and filtered based on corporate policy for the protection of intellectual property.

## Sharing synchronized files

Kitedrive sync not only offers business users the ability to securely synchronize files, but also securely share files with internal and external stakeholders. Business professionals can easily share files by accessing kitedrive through the web interface and selecting the files they want to send to recipients internal and external to the organization. As with all Accellion solutions, files are sent as secure links to intended recipients. Users can also share kitedrive nested workspaces with internal and external collaborators.

## Conflict Resolution

Kitedrive sync offers conflict resolution on files to ensure that important content isn't automatically overridden or deleted when two users edit the same document and then upload the file to shared kitedrive nested workspaces. When a potential conflict occurs, the Accellion system prompts users to decide whether to upload their existing document, download the new document, or "Pause Sync" to determine what action needs to be taken.

## Mobile Access

Accellion Mobile Apps enable business users to securely access synchronized files in kitedrive from their mobile devices. With native Accellion Mobile Apps, mobile users can browse, view, edit, share, save for offline, and upload files to Accellion. Files edited on the device and saved back to kitedrive are synchronized in the cloud to enable access on a user's laptop, desktop and any other device users have. When files are shared via Accellion, confidential and proprietary information stays secure.

## KEY FEATURES

- File synchronization of any type of file up to 2G
- File version tracking
- Mobile access – iPhone, iPad, Android, and BlackBerry
- Activity logs for administrators
- LDAP integration
- Single sign-on through SAML
