

## Virtual Appliance

### The Accellion Virtual Appliance is the ideal choice for secure collaboration and secure file transfer deployments in virtual environments.

Accellion is a pioneer in appliance-based secure collaboration and secure file transfer, and is leading the market with its innovative approach to enable organizations to share information securely. Today, Accellion Appliances are installed in over 35 countries and handle TeraBytes of file transfers every day, effortlessly and securely. With over 2,000,000 Accellion users, Accellion secure collaboration and file transfer are the standard for enterprise file sharing.

The Accellion Appliance is a core component of the Accellion secure collaboration and secure file transfer system. It incorporates the software that drives Accellion secure file sharing.

Accellion appliances come in virtual, cloud and hardware-based configurations, in a range of sizes to ensure that each installation is properly sized. Appliances can be mixed and matched both on-premise and in-the-cloud to support both multi-office installation and stand-alone single site solutions. With a choice of appliance sizes, Accellion can design an installation that offers room for growth, yet still ensures that you achieve a quick return on investment.

The Accellion Virtual Appliance is suited for deployment in on-premise VMware, Citrix XenServer, and Microsoft Hyper-V virtual environments and also in VMware vCloud installations.

### Business File Sharing Needs

Gone are the days of limited network traffic and few security concerns. IT staff and business users can no longer rely upon FTP and email to transfer files. Large digital files (>10MB) have spread from specialty uses – video and audio files, engineering documents, medical diagnostics, lab results – to the everyday business needs of sharing presentations or high resolution graphics and photos. CDs, email, and FTP are no longer adequate to support the secure file sharing needs of business users and regulatory and legal security mandates.

### Benefits

#### Send any size file and folder securely and easily

Accellion enables business users to securely share and send files and folders of any size – up to 100GB – to recipients at any location and

#### KEY BENEFITS

- Enables deployment of secure file transfer within a VMware, Citrix XenServer, or Microsoft Hyper-V virtual environment
- Enables secure collaboration and transfer of files and folders up to 100GB in size
- Reduces power consumption and HVAC investments
- Eliminates FTP support
- Enables compliance with SOX, HIPAA, FDA
- Reduces IT support
- Increases data security
- Delivers rapid scalability
- Offers flexible deployment

organization. By moving file sharing to an Accellion appliance, business users and administrators will notice improved email server performance and reduced email storage requirements.

#### Reduce business cycle time by eliminating FTP servers and overnight deliveries

Accellion enables secure file sharing at electronic speeds with minimal IT support and an easy to use interface for business users.

#### Achieve Sarbanes Oxley and regulatory compliance

Accellion is a key component in implementing the secure and auditable file sharing processes required for meeting IP security needs and compliance mandates such as Sarbanes-Oxley Section 404, 21 CFR Part 11, HIPAA, Department of Defense (DOD) 5015.2, and Securities and Exchange (SEC) Act Rules 17a-3 4 (17 CFR 240.17a-3,4).

### Business File Sharing Needs

Accellion secure collaboration and secure file transfer incorporate both business-level and data security features.

#### File/Data Security

For each file transferred, the Accellion Appliance provides a secure link generated by a double 128-bit MD5 token. SSL/TLS is used for encrypting file uploads and downloads using HTTPS. IPsec is used as files are replicated between appliances.

#### Business Level Security

Accellion Secure Collaboration and Accellion Secure File Transfer contain an authentication check point to validate recipients so

confidential information is not overexposed. Users get return receipts with every file transfer and Accellion provides an audit trail with its file tracking and reporting features. Each file link is assigned a limited lifespan with the expiration encoded within.

## Ease of Use & Flexibility

Deployment of an Accellion Virtual Appliance is as simple as a software download, enabling rapid enterprise-wide deployment. Additional virtual appliances and storage capacity can be provisioned in minutes to allow easy scale-ability to meet enterprise file sharing needs.

Accellion enables flexible deployment configurations supporting integration of both hardware-based and virtual appliances. Once you install an Accellion Appliance you may never notice it again.

## Dependability

The Accellion Virtual Appliance allows organizations to leverage VMWare's ESX server to take advantage of vSphere's high availability functionality.

The Accellion remote failover feature provides geographic redundancy protection between two appliances installed in different locations.

## File Replication - Get Files Fast

In multi-site installations Accellion provides file replication between Accellion Appliances enabling flexible, customizable, distribution and storage of files throughout an Accellion appliance network. Accellion file replication technology is patented and provides valuable performance benefits.

Accellion file replication enables users to download files from the nearest Accellion Appliance with faster download speeds. File replication is triggered either by preset replication rules, manual replication request or by smart replication whereby Accellion automatically replicates files based on the recipient profile.

## Savings

The Accellion Virtual Appliance offers secure file sharing and file transfer capabilities with a reduced hardware footprint, and reduced power consumption and HVAC requirements.

Using Accellion, organizations can significantly reduce the cost of sharing digital information by eliminating overnight delivery charges and the reducing IT support costs for FTP and ad-hoc file sharing systems.

## KEY FEATURES

- Securely send files up to 100GB in size
- Achieve compliance with SOX, HIPAA, FDA
- Offload files from email system for improved email performance and reduced email storage
- Implement audit trail for files
- Increase data security
- Automate file transfer management
- Obtain return receipt for file transfers
- Microsoft Outlook 2007 and 2010
- Microsoft SharePoint 2007 and 2010
- Microsoft OCS 2007 R2
